

CASE STUDY

ASSET INSPECTIONS

CLIENT: INEOS FPS

LOCATION: SCOTLAND

HIGHLIGHTS

- Asset Management
- Inspection
- Structural Engineering

THE CHALLENGE

The client has a number of nationally critical infrastructure assets which are reaching the end of their intended design life. In order to allow life extension of their asset, a comprehensive inspection programme is in place to ensure all civil/structural elements are in a safe and satisfactory condition, and any required remedial work is highlighted and actioned within a set timeframe.

THE SOLUTION

Arthian is a framework consultant for the client providing all structural inspection services across the onshore assets in Scotland. This includes providing upfront WSEs, inspection and reporting against best practice guidance and client standards and raising any required repair orders on the client's system.

Arthian have a wide range of qualified and experienced staff in asset management, structural inspection, remedial work specification and providing guidance to clients on how best to extend the life of their aging assets.
